CMP BOARD AND BATTEN PANEL

Board and Batten siding has a rich history dating back to the Victorian era. It is once again a popular trend in home and agricultural construction. In years past, lumber was the best choice for this style of siding, but now you get the classic look with the added durability and paint finish performance of metal. A great alternative to the fiber cement options on the market as well, with metal being less of a mess along with no need to paint/seal, and no lining up batten strips. With the capability to install these panels in either direction, the aesthetic possibilities are without limit. The Board and Batten panel is attached with concealed fasteners through its slotted securement flange, allowing for expansion and contraction.

PANEL SPECIFICATIONS

- Can be installed horizontally or vertically.
- Widths – Nominal 12" or 16" standard in 24 ga and .032" aluminum Nominal 16" standard for 26 ga material
- Seam Height – $\frac{3}{4}$ "
- Clipless installation
- Made to exact lengths
